

Assignment 1 – Test Cases

Here is a list of possible scenarios which might be used for evaluating your web applications

Case 1: Primary functionalities

1. Cashier creates an order
2. Cashier amends the order by adding an addition
3. Cashier creates a Payment for the order
4. Barista gets the list of all Open Orders (only one order is available)
5. Barista changes the status of the Order to being prepared
6. Barista checks if the order is paid
7. Barista releases the order
8. Barista gets the list of all Open Orders (No order is available)

Case 2: Order cannot be amended or cancelled after payment or barista's status update

1. Cashier creates an order
2. Cashier creates a Payment for the order
3. Cashier amends the order by adding an addition, but it is refused
4. Cashier tries to cancel the order, but it is refused

Case 3: Multiple Order

1. Cashier creates an order (order 1)
2. Cashier creates an order (order 2)
3. Cashier creates an order (order 3)
4. Cashier amends the Order-2 by adding an addition
5. Cashier creates a Payment for the order-1
6. Cashier creates a Payment for the order-2
7. Barista gets the list of all Open Orders (two orders are available)
